

SEE WHICH SOYBEAN VARIETIES HELP PROTECT LIVESTOCK FEED MARKETS

SOYBEAN VARIETY RANKINGS – U.S.

When selecting soybean varieties, considering feed value is an easy way to protect farm revenue and market share. That's because livestock producers shop for the best feed ingredients they can find at the lowest possible price.

The following pages summarize the results of analysis of 600 soybean seed varieties based on 54,540 soybean samples and their corresponding livestock feed value. Varieties must have been planted in 2019 or 2020 trials, have at least 5 observations, and have a relative value score of at least 5.0. Varieties are ranked based on their livestock feed value score on a scale of 1 (lowest) to 10 (highest). A score of 5 represents the minimum threshold for livestock feed value.

You can also submit your own samples in the Fall to receive a personal feed value report by visiting usb.soyvalue.com.

SOYBEAN VALUE PERFORMANCE SUMMARY BY VARIETY FROM 2013-2020 F.I.R.S.T. TRIALS

AGRIGOLD
